

SUDHEERA S. PERERA

Software & Cybersecurity Architecture Undergraduate

sudheera2027@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Cybersecurity undergraduate with hands-on experience across secure network design, full-stack development, and system architecture. Built production-style platforms spanning logistics, fleet management, and e-commerce, and engineered enterprise-scale network infrastructures using VLSM subnetting. Top 5% CTF finisher and hackathon award winner, looking to bring architecture-level thinking to secure, scalable systems.

TECHNICAL SKILLS

Architecture & Security: Network Architecture Design, VLSM Subnetting, DHCP Configuration, Cisco Packet Tracer, Role-Based Access Control, Secure System Design

Languages & Databases: Python, JavaScript, C#, PHP, SQL, HTML/CSS, MySQL

Platforms & Tools: Linux (Ubuntu), Windows, Git, Visual Studio Code

PROJECTS

Fleet Management & Analytics System — *built for a supply chain company*

- Developed a real-world fleet management system to improve supply-chain visibility across vehicles, drivers, trailers, assignments, and document expiry tracking.
- Implemented fuel and vehicle performance analytics, including fuel consumption, cost, KM/L efficiency, odometer-based distance tracking, and anomaly identification.
- Built Excel data import and processing workflows for large fuel, odometer, and dispatch datasets, with validation, vehicle matching, and automated weekly/monthly utilization calculations.
- Developed fleet utilization and reporting features to analyze vehicle trips, pallet delivery, fleet performance, and operational efficiency through dashboards and PDF/Excel reports.

Bharana E-Commerce Bookstore — Backend & Admin Panel- *built for a client*

- Designed and developed the backend architecture and PostgreSQL database, implementing role-based access control for Admin and User accounts.
- Implemented JWT authentication and Google Sign-In, with secure access control for the admin platform.
- Integrated PayHere payment gateway and a third-party courier API to support online payments, order processing, shipment management, and delivery status updates.
- Built an admin order management and analytics system with Excel export capabilities, giving the client visibility into orders and overall platform activity.

Real-Time Logistics Management System

- Designed and developed a logistics platform with real-time tracking, Rule base route optimization, and fail delivery handling.
- Analyzed and modeled delivery data to support efficient route allocation and operational visibility.

Enterprise Network Infrastructure Design (Cisco Packet Tracer)

- Planned and engineered a network architecture for 600+ endpoints across 10+ subnets using VLSM.
- Calculated and implemented subnetting schemes and configured DHCP services across all network segments.
- Documented the topology and addressing scheme to support future scaling and troubleshooting.

Online Vehicle Retail Platform — Full-Stack Web Application

- Developed a database-driven vehicle retail website with product listings, user interactions, and administrative management features.
- Integrated and maintained backend logic to ensure data integrity and scalable functionality.

HACKATHONS & CTF ACHIEVEMENTS

- University CTF Challenge (AFTERMATH), 2024 — Top 5% finish
- Internal Hackathon — Classroom Scheduling System, 2024 — 1st Place
- Inter-University Hackathon — Disaster Response System, 2024
- Holds a 1st Dan black belt in Karate — reflects discipline and structured, long-term skill-building.

EDUCATION

BSc (Hons) in Cybersecurity — Asia Pacific Institute of Information Technology (APIIT) 2024 – 2027 (Expected)

Diploma in Information Technology (DiTEC) — Esoft Metro Campus 2024

Python Developer Masters Program — Edureka 2024

LANGUAGES

English, Sinhala
